

Diskeeper® 2011

Optimum system
performance. Always.™

Diskeeper 2011 Pro Premier Edition: Maximizing System Speed and Efficiency for the Entire Workforce

Because company workstations can number in the hundreds and thousands, their cumulative management is a significant expense of time, material and man hours. Nothing can improve the overall speed and efficiency of every Windows® system as broadly and effortlessly as Diskeeper Pro Premier® data performance technology. No other performance technology has the range of functionality or tools necessary to address core performance issues on every system. With one global install, you get all this and more:

- Prevents up to 85% of all fragmentation before it can happen, enormously improving read and write speeds.
- Uses new technology that ensures zero resource conflicts when running in the background.
- Speeds access of most-used files up to 10-20% beyond what defragmentation alone achieves.
- Extends system life an average of 2.5 additional years.
- Significantly lowers energy consumption.
- Lowers Help Desk traffic.
- Decreases both planned and unplanned downtime.
- Eliminates fragmentation-related slows, crashes, freezes and errors.
- Lowers total cost of ownership and frees up more budget allocation for proactive initiatives.
- Proven to cost less than running a network without it.

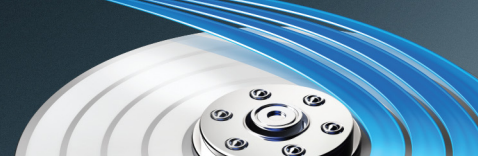

Diskeeper Pro Premier is exactly what every system administrator needs to cost-effectively manage hundreds, even thousands, of computer systems. Diskeeper is indispensable for users with massive hard drives and increasingly larger amounts of data. The more intense the file activity, the more productivity Pro Premier will save from fragmentation bottlenecks.

Today's typically massive hard disk volumes are quickly defragmented with Terabyte Volume Engine® (TVE) technology – a defrag engine designed specifically to handle large volumes with hundreds of thousands of files. TVE gives Diskeeper the means to automatically launch the correct defrag engine based on the volume being defragmented.

Terabyte Volume Engine

(available in Diskeeper 2011 Pro Premier)

Exclusively available in Diskeeper Pro Premier. Terabyte Volume Engine (TVE) is a powerful defrag engine capable of eliminating the heavy fragmentation on volumes of 60 GB+. Diskeeper automatically launches the correct engine based on the volume being defragmented, handles millions of fragments on volumes of unlimited size and has zero resource conflicts with the ongoing disk I/Os of a busy PC. The greater the number of files and fragments on a volume, the more dramatic TVE's benefits will be.

Diskeeper Pro Premier Major Features

- IntelliWrite® fragmentation prevention technology. Prevents the majority of files being written and scattered around the disk in pieces, thus avoiding slow write and read speeds and wasted I/O resources.
- InvisiTasking® technology, ensures zero system resource conflicts.
- Instant Defrag™ engine. A new intelligence that ensures the files you need will never have to be read in pieces. Combined with IntelliWrite, every system runs completely free of the negative effects of fragmentation, regardless of traffic volume.
- Efficient Mode. Offers the most net gain in system I/O resource savings ever available.
- Free space consolidation engine. Swiftly consolidates free space and tightly integrates with Instant Defrag to make the entire system far more efficient than it would be without these tools.
- I-FAAST® optimization increases data access speed 10-20% beyond defragmentation alone results.

Also available: Diskeeper 2011 Professional edition.
Does not include the Terabyte Volume Engine.

Operating Systems Supported

- Windows XP (all editions)
- Windows Vista (all editions)
- Windows 7 (all editions)

Disk Sub-Systems Supported

Primary Partitions, Extended Partitions, Logical Drives,
Volume Sets, RAID Arrays (hardware & software), Mirrored
Disks, Mounted Volumes (letter-less)

What is I-FAAST?

Intelligent File Access Acceleration Sequencing Technology (I-FAAST) is a sophisticated tracking and recognition software that accurately identifies the files that are most relied upon by the user and strategically sequences them for up to 80% faster retrieval on workstations and servers. It's the files needed most frequently that affect productivity the most. When enabled, I-FAAST runs benchmarks on the disk volumes to learn their performance characteristics. Diskeeper then continually monitors volumes to determine which files are requested most often. I-FAAST boosts file access and creation speeds over and above the performance gains obtained by defragmentation alone.
