

Feature Comparison Chart To File/Data Backup Software

Feature	Undelete 2009 (Continuous Data Protection for Files)	File / Data Backup Software
Real-time (event based) "File" Recovery	YES All file deletions are captured with a powerful file filter and protected in the Undelete 'Recovery Bin'.	NO All changes/deletions in between backups are lost.
Recover Microsoft Office® File Versions (any/all saved-over Office files)	YES Integrated with Explorer, users can right click on files and rapidly restore any/every variation.	NO Still reliant on a backup having recorded a previous version.
Instant File Recovery	YES	NO Typically takes 10+ minutes, and up to 30 minutes if backups are on tape.
"Forensic" Information	YES (Including <i>who</i> deleted the file).	NO
Robust Deleted File Search Capabilities	YES	NO
Easy-To-Use File Recovery	YES Integrates with standard file recovery (i.e. Recycle Bin) procedures – point and click simplicity.	NO Reliant on the user properly informing IT of the file name, location, and time of deletion.
Command Line Recovery	YES	NO
SecureDelete® 2.0	YES DoD/NSA compliant <i>permanent</i> file deletion and free space overwrite.	NO
Direct from Disk File Recovery	YES Supports recovering of files directly from the file system (after files have been purged from the Recovery Bin).	NO
Time-Based File Storage	YES (e.g. store deleted files for 7 days).	NO Once the data is backed-up it exists until the storage medium is re-used/over-written.
Deleted File Storage Redirection	YES Deleted files can be redirected to user defined locations (e.g. move deleted files from C:\ to F:\ for protection and storage).	NO
End User Recovery of Deleted Data	YES Undelete Professional or Undelete Desktop Client automatically connects to Undelete Servers and displays recoverable files.	NO
Hierarchical User Interface View of File Recovery Locations	YES Icons indicate recoverable deleted files from local (volume) and remote (share) locations.	NO
