

ScriptLogic® Active Directory Management

Award Winning Solutions

ScriptLogic's Active Directory Management Solutions provide administrators a comprehensive approach to managing all aspects of Active Directory. We help you tighten security, increase productivity and improve business continuity by providing advanced solutions to help with auditing and reporting, back-up and recovery, simplified delegation of AD and true management of Group Policy. Whether your needs are broad in scope, or if you have very specific requirements for deeper auditing, user provisioning, and diagnostics and troubleshooting, our family of Active Directory management products offers a variety of solutions to simplify, centralize and automate your everyday management of Active Directory.

ScriptLogic Active Directory Management Products

□ Active Administrator

Active Administrator is a comprehensive, integrated Active Directory management and auditing solution for tightening security, increasing productivity and improving business continuity in organizations with Windows networks. By providing advanced management features including centralized event auditing and reporting, back-up and recovery, simplified delegation of AD, and Group Policy offline editing and rollback, Active Administrator is the most comprehensive approach on the market today for overall Active Directory management.

□ Quest®ActiveRoles Server

Quest ActiveRoles Server allows administrators to provision, re-provision, and de-provision Active Directory user accounts quickly, securely and according to standards. ActiveRoles Server provides strictly enforced role-based security, group management, change approval, and easy-to-use Web interfaces for self-service, to achieve practical user and group lifecycle management for your Windows enterprise.

□ Quest®GPOAdmin

Quest GPOAdmin simplifies and secures Group Policy management so organizations can save time and money, operate within corporate policies and achieve greater uptime. GPOAdmin integrates into GPMC, the standard Windows Group Policy management tool, and provides change approval workflow, version control and rollback, and comparison and reporting functions.

□ Quest®Recovery Manager for AD

Quest Recovery Manager for AD minimizes downtime caused by corruption or improper modification of directory, configuration and Group Policy data. This solution provides centralized, simplified and automated backup, with remote, online and granular restore capabilities so Active Directory is always available, and users are always up and running.

□ Quest®Change Auditor for AD

Quest Change Auditor for AD proactively tracks, audits, reports and alerts on vital configuration changes without the overhead of native auditing. This key component to your overall Active Directory management arsenal tracks all key configuration changes in real-time including GPO, schema, critical group and operational changes.

□ Quest®Reporter

Quest Reporter provides automated discovery and comparison of configuration related items to support planning, securing and auditing of your Windows infrastructure. Enabling IT organizations to collect, compare and report on Active Directory and Windows based configurations which is essential for change auditing, security assessments, or pre- and post- migration analyses.

□ Quest®Spotlight on AD

Quest Spotlight on AD helps administrators diagnose and resolve replication, performance and availability problems in Active Directory. Spotlight on Active Directory features a powerful topology viewer, graphical diagnostic console, analysis tests, and expert help so administrators can quickly identify the root-cause of problems in Active Directory, and promptly resolve them.
