

SECURITY EXPLORER[®]

FAMILY OF PRODUCTS

Security Explorer is a powerful, graphical solution for real-time management of access controls and security on files and folders, SharePoint, SQL Servers, Exchange and workstations across the enterprise. This broad, real-time solution offers administrators the ability to manage, search, clone, backup, and recover permissions across the network.

PROTECT YOUR WINDOWS ENVIRONMENT

Managing the security of Windows servers and workstations is a never-ending task. With the growing number of attacks from both outside the corporate network and inside company walls; ensuring that your Windows network is secure has become a complex undertaking for most administrators. How do you set up access controls and permissions? How do you get the details on permissions for file servers? SharePoint? SQL Server? And in Exchange, how can you see who has access to the CEO's calendar?

Internal regulations and external compliance directives mandate that IT has strict control over access to certain files and folders, workstations, SQL Server, SharePoint; and now, with the increasing reliance on messaging for corporate communication—Exchange. Having a standardized security management solution across your entire Windows network is a critical piece to any overall security management strategy.

The Security Explorer family of products allows you to simplify permission management on NTFS file and folder security, file shares, services, printer access, registry security and scheduled tasks, SharePoint, SQL Server and Exchange ensuring that access to privileged information is restricted and the Windows network is secure. These solutions allow you to manage, search, clone, backup and recover permissions across the network.

SECURITY EXPLORER 7.0

Security Explorer File and Print Management for Windows Servers	Comprehensive management for Windows servers of security and permissions on NTFS volumes, printers, file shares, registry, services, scheduled tasks and local users and groups.
Security Explorer Services, Tasks and Account Management for Windows Servers	For administrators who need to manage and secure only services, tasks, local users and groups on Windows servers.
Security Explorer for Workstations	Manages security and permissions on Windows workstations for NTFS volumes, printers, file shares, registry, services, scheduled tasks and local users and groups.
Security Explorer for SharePoint	Controls SharePoint groups and permission levels with the ability to manage, search, delegate and recover from a central console.
Security Explorer for SQL Server	Ensures access to privileged database information is restricted and simplifies the overall management of SQL Server security.
Security Explorer for Exchange	Manage permissions found in both Exchange and Active Directory from one, easy-to-use interface, to ensure proper access controls are in place.

KEY BENEFITS

Increase Productivity

Get faster results and increase administrator availability with an intuitive, security focused interface, multi-threading and powerful search capabilities

Meet Compliance Objectives

Reduce the time needed to implement security standards on your entire Windows network and easily recover from any out-of-compliance situations

Increase Server Security

Complete permissions management empowers administrators to lock down server resources and eliminate overexposed files, folders and server resources

KEY FEATURES

Search Across the Enterprise

Rapidly scan for any combination of permissions granted to specific users, groups, inherited or explicit.

High-Performance Interface

A multi-threaded architecture, cached browsing, and "Stop" button to stop enumeration of large folder structures make managing security quick and efficient

Backup and Recover Permissions

Instantly recover permissions to restore security and meet corporate policy and compliance objectives.

SYSTEM REQUIREMENTS

Security Explorer can be installed on and manage Windows 2000/XP/2003/2008/Vista and requires .NET 2.0

LICENSING

Security Explorer licensing varies depending on which product you wish to purchase.
