

Get fast relief with ELM Event Log Monitor

From a centralized console, EVM reliably collects millions of events from hundreds of Windows systems, presents the information in a granular format, and launches alerts so that System Administrators can replace forensic follow-up with proactive management. Using EVM's automated monitoring, rich notifications, and preconfigured reports, Compliance Managers get relief with reduced system management costs and a fortified security perimeter.

Monitoring

With EVM, administrators can monitor Windows systems at scheduled intervals or in real-time. Real-time monitoring uses a Service Agent on the target system, while scheduled monitoring is performed with a Virtual Agent.

- ◆ Consolidation of Windows events logs
- ◆ Alerts for presence or absence of specific Windows Events

Notification

EVM allows IT Managers to customize notification options to reach the responsible administrator or take automated corrective action. Barrage protection prevents event storms from becoming a nuisance.

- ◆ **ELM Advisor** is an innovative desktop notification exclusive to TNT Software that informs IT Administrators of changing conditions without disrupting their workflow.

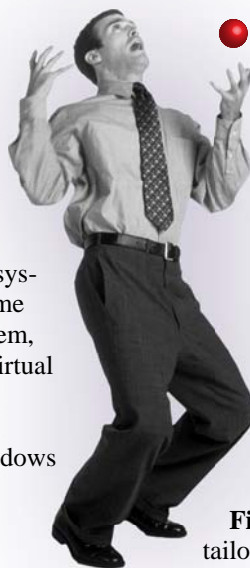

Notification options are:

- ◆ Pager
- ◆ Network popup
- ◆ Text to speech
- ◆ Syslog message
- ◆ SNMP OID/trap

Database

EVM supports Microsoft SQL Server and Microsoft SQL Server 2000 Desktop Engine. **Database Failover** provides fault-tolerant, continuous collection of monitored system information. Filter-based archiving and pruning tools are provided with EVM to efficiently manage critical data and storage costs.

We know
how you
feel...

ELM Event Log Monitor includes:

- ◆ **Agents** collect data from the monitored systems.
- ◆ **ELM Server** receives and processes data from the Agents.
- ◆ **Database** stores and archives data from the ELM Server (provided by user).
- ◆ **ELM Console**, a Microsoft Management Console snap-in, is the User Interface.
- ◆ **Web Viewer** provides easy access to a streamlined version of the ELM Console.

Results

With ELM Event Log Monitor, IT Managers gain a clear view of the changing conditions of their systems.

At-a-glance Views display critical data for rapid problem identification and resolution. The IT professional can easily see alerts and Windows events from each monitored system without leaving the ELM Console.

Filtered Views provide the ability to build views tailored to functional objectives. Administrators can immediately focus on specific sets of event data.

EVM Reports automates the configuration of informative reports designed for distribution to IT Managers, Security Auditors, and other IT professionals. Reports include:

- ◆ Alert Summary
- ◆ Event Summary
- ◆ Audit
 - ◆ Logon/logoff Activity
 - ◆ Privilege Use
 - ◆ Object Access
 - ◆ Computer Account Management
 - ◆ User Account Management
