

# Everything you need to manage VMware

Veeam helps VMware administrators and datacenter managers cope with dynamic VMware infrastructures, providing enhanced tools for:

- Backup, replication and fast recovery of virtual machines and data
- Automated reporting and change control for large VMware environments
- ESX server and virtual machine capacity monitoring and advanced alerting
- ESX server configuration management
- Integration of VMware events, performance and management into HP Software Operations Manager and Microsoft System Center Operations Manager
- VMware vSphere 4 management

### Veeam Backup & Replication for VMware

Veeam Backup combines backup and replication in a single product for fast recovery of your VMware ESX Servers. Fast file-level recovery lets you restore individual files in minutes without extracting the full image to a local drive. Data de-duplication and compression save time and storage space. VMware Consolidated Backup, Microsoft Volume Shadow Copy Service and VMware ESXi are all supported (excluding ESXi free).

### Veeam Reporter Enterprise for VMware

Veeam Reporter Enterprise is the first reporting solution specifically designed for large VMware virtual environments. Veeam Reporter Enterprise provides unattended data collection and scheduled or ad hoc reporting, as well as centralized data storage to help you discover, document and report on all the objects within your VMware virtual infrastructure right now, and at any point in the past.

### Veeam Monitor for VMware

Veeam Monitor is an easy-to-deploy, framework-independent VMware monitoring solution created expressly to help you better manage the health and performance of your virtual environment across multiple vCenters. Veeam Monitor provides support for troubleshooting and issue resolution, as well as trend reporting and capacity planning - equipping you to proactively manage VMware and vSphere system health and performance today and over the long term. Full integration with Veeam Business View helps you monitor and manage VMware environment by department, location or SLA.

### Veeam nworks Management Pack for VMware

*VMware Monitoring with Microsoft System Center Operations Manager*

Leverage the enterprise systems management framework you've already invested in with this agentless management pack that publishes vSphere state, performance, capacity, configuration, topology and events directly into Microsoft System Center Operations Manager.

### Veeam nworks Smart Plug-in for VMware

*VMware Monitoring with HP Operations Manager*

Incorporate VMware vSphere state, performance, capacity, configuration, topology and events directly into HP Software Operations Manager with this agentless certified Smart Plug-in.

### Veeam Business View

Veeam Business View is an add-on that works with other Veeam products to provide business categorization for your VMware vSphere environment. Business View allows you to group, view and manage virtual machines (VMs) based on criteria such as business unit, department, purpose, SLA etc., instead of their VMware infrastructure location. Set up rules and policies once, and new VMs will be automatically assigned according to your best practices.
